EVOLEX FOODS

Business Operations & Technology Manager

Six-Month Business Operations, Digital Infrastructure, AI & Commercial Implementation Manual

Implementation Period

First 180 days.

Primary Objective

Build the operating, digital, data, marketing, commercial, and management infrastructure of Evolex Foods.

---

1. Your Mandate

You have been hired to build the operating and digital backbone of Evolex Foods.

Your role combines business operations, technology implementation, process improvement, data management, business intelligence, digital infrastructure, artificial intelligence, marketing technology, sales systems, automation, documentation, and management reporting.

You are not being hired primarily to write software.

Your first responsibility is to make Evolex:

- measurable;
- organized;
- digital;
- controlled;
- automated where practical;
- visible to ownership;
- scalable.

The systems you establish during your first six months will become the foundation upon which Evolex can grow from an early livestock operation into a much larger food and agribusiness enterprise.

---

2. The Company You Are Building For

Do not design systems only for today's goat farm.

Evolex is being built to eventually operate across livestock breeding, goat production, sheep, cattle, dairy, meat processing, sausage production, yogurt, milk, broth, packaged foods, feed, crop production, cold storage, warehouses, transportation, distribution, supermarkets, institutional sales, export, restaurants, multiple farms, and processing factories.

You are not expected to build all of those systems today.

You are expected to build today's systems so they can evolve into that larger enterprise.

---

3. Your Six-Month Objective

By Day 180, management should be able to understand Evolex remotely without depending primarily on verbal reports, memory, or scattered WhatsApp messages.

Management should be able to answer questions such as:

- How many animals do we own?
- Where are they?
- How many are female?
- How many are male?
- How many are pregnant?
- How many births have occurred?
- How many deaths have occurred?
- What is the mortality rate?
- Which animals are sick?
- Which animals are under treatment?
- How quickly is the herd growing?
- How much feed remains?
- How many days of feed remain?
- Which medicines are available?

- Which inventory items are low?
- What purchases have been requested?
- Who approved each purchase?
- What has been purchased?
- What equipment does Evolex own?
- What equipment requires maintenance?
- Who is working?
- What tasks remain incomplete?
- How much are we spending?
- Who are our suppliers?
- Who are our potential customers?
- What commercial opportunities exist?
- What marketing is being produced?
- How are our digital channels performing?
- What risks currently exist?
- What decisions require ownership approval?

If the systems you build cannot answer these questions reliably, the work is not complete.

---

4. How You Will Build Every System

For every process, follow this sequence:

Understand → Standardize → Document → Digitize → Train → Verify → Report → Automate → Improve

Before building a system:

1. Observe how the activity is currently performed.
2. Determine how it should be performed.
3. Write the SOP.
4. Move the process into the approved company system.
5. Train the employees responsible.
6. Confirm they are actually using it.
7. Convert the data into management reporting.
8. Automate repetitive work.
9. Continue improving the process.

Do not automate a process that has not been standardized.

Do not build custom software when an inexpensive existing system adequately performs the function.

---

5. Evolex Technology Philosophy

The company will operate according to four technology principles.

Google First

Before purchasing another administrative application, use the Google Workspace environment wherever it can properly perform the task.

AI First for Digital Production

Before outsourcing routine writing, design, video editing, voiceover, content creation, research, or scheduling, determine whether the approved AI and marketing stack can perform the work internally.

Automation Before Administrative Headcount

Before hiring people to perform repetitive digital or administrative tasks, determine whether the process can be automated.

Specialized Systems Where Necessary

Google will not replace every enterprise application. Where a specialized system is needed, use the approved systems in this manual.

---

6. Approved Evolex Technology Stack

You are expected to implement this architecture.

Do not spend your first six months comparing dozens of software tools.

Google Workspace Business Standard

Primary digital workplace.

Use:

- Gmail

- Google Drive
- Google Docs
- Google Sheets
- Google Forms
- Google Slides
- Google Calendar
- Google Meet
- Google Chat
- Google Tasks
- Google Keep
- Google Sites
- Google Vids
- Gemini
- NotebookLM
- Google Apps Script
- Google AppSheet where appropriate

Looker Studio

Management dashboards and business intelligence.

Odoo Community

Structured enterprise operations.

Primary responsibilities:

- procurement;
- inventory;
- suppliers;
- maintenance;
- future warehousing;
- future manufacturing;
- future processing;
- future distribution.

HubSpot Free

Commercial CRM.

Primary responsibilities:

- prospects;
- buyers;
- customers;

- sales pipeline;
- commercial follow-up.

WordPress

Public Evolex Foods website.

Cloudflare

Domain DNS, website protection, and related web infrastructure.

Google Analytics

Website traffic and conversion analysis.

Google Search Console

Search visibility and indexing.

WhatsApp Business

Customer and supplier messaging.

Buffer

Social-media scheduling.

Canva

Graphic design and marketing production.

CapCut

Routine video editing and short-form social video.

Kling AI

Primary generative AI video platform.

ElevenLabs

Professional AI voiceovers when needed.

ChatGPT

Primary business strategy, reasoning, ideation, analysis, and AI productivity platform.

Claude

Long-form documents, technical writing, coding, software-development support, and complex research synthesis.

Gemini

Google-native AI assistant.

NotebookLM

Source-grounded company knowledge and research.

Qwen

Primary Chinese-ecosystem AI.

DeepSeek

Secondary technical, reasoning, and coding AI.

---

7. System Ownership Rule

Do not allow applications to compete unnecessarily.

Each system owns a specific area.

Google Workspace

Company communication and knowledge.

Google Drive

Official document repository.

Google Sheets + Forms

Initial livestock and farm operational data.

Odoo

Enterprise operations.

HubSpot

Customers and sales.

Looker Studio

Management visibility.

WordPress

Public website.

Buffer

Content publishing schedule.

AI Tools

Productivity, analysis, content production, research, and automation support.

AI tools are not permanent systems of record.

Month 1 — Understand Evolex and Establish Digital Control

8. Complete the Farm Operations Audit

During Month 1, spend significant time physically understanding the farm.

Do not spend the month sitting behind a computer writing software.

Document the current process for:

- feeding;
- watering;
- animal housing;

- breeding;
- pregnancy;
- births;
- animal identification;
- animal health;
- medication;
- vaccinations;
- mortality;
- feed purchasing;
- inventory;
- employee attendance;
- task assignment;
- procurement;
- goods receiving;
- maintenance;
- security;
- expenses;
- management reporting.

For each process identify:

- who performs it;
- who supervises it;
- how it is currently recorded;
- what can go wrong;
- what information is missing;
- what controls are needed.

---

9. Complete the Livestock Audit

Physically count all livestock.

Do not rely only on existing numbers provided by staff.

Record:

- species;
- sex;
- breed where known;
- approximate age;
- breeding status;
- pregnancy status;
- health condition;

- existing identification;
- location.

This becomes the verified opening herd balance.

---

10. Create the Evolex Animal Identification System

Use this format:

EV-GT-000001

Where:

- EV = Evolex
- GT = Goat
- 000001 = unique animal number

Future examples:

- EV-SH-000001 = Sheep
- EV-CT-000001 = Cattle

Never reuse an Animal ID.

---

11. Set Up Google Workspace

Create and configure the official Evolex Foods Google Workspace environment.

The domain must be owned by Evolex Foods.

Administrator control must remain with Evolex.

Do not place company infrastructure under your personal account.

---

12. Create the Super Administrator Structure

Create a company-controlled administrator account.

Ownership must have recovery access.

Configure:

- multi-factor authentication;
- recovery information;
- administrator alerts;
- security settings;
- user-management permissions.

Maintain a restricted system-administration register showing:

- system;
- administrator;
- billing owner;
- recovery owner;
- renewal information;
- configuration notes.

Do not store passwords directly in an ordinary spreadsheet.

---

13. Evolex Email Naming Standard

All individual company email addresses will follow:

first initial + last name @ evolexfoods.com

Use lowercase letters.

Examples:

Kojo Sefah
ksefah@evolexfoods.com

Ama Boateng
aboateng@evolexfoods.com

Kwame Mensah
kmensah@evolexfoods.com

Abena Owusu
aowusu@evolexfoods.com

---

14. Duplicate Email Names

If two employees would receive the same email address, use this order:

1. First initial + last name
2. First two letters of first name + last name
3. Full first name + last name

Example:

Kwame Mensah
kmensah@evolexfoods.com

Kofi Mensah
komensah@evolexfoods.com

Do not use nicknames.

Do not use random numbers unless absolutely necessary.

---

15. Functional Company Email Addresses

Create functional addresses where required:

- info@evolexfoods.com
- sales@evolexfoods.com
- procurement@evolexfoods.com
- accounts@evolexfoods.com
- careers@evolexfoods.com
- marketing@evolexfoods.com
- operations@evolexfoods.com
- support@evolexfoods.com

Where possible, create these as aliases, groups, or routing addresses rather than buying unnecessary additional user licenses.

---

16. Email Signature Standard

Create one standardized company signature.

Include:

- full name;
- position;
- Evolex Foods;
- telephone;
- website;
- company logo where appropriate.

Employees must not use personal Gmail, Yahoo, or similar accounts for routine official business.

---

17. Employee Email Offboarding

When an employee leaves:

- suspend the account immediately;
- transfer ownership of important files;
- preserve relevant email;
- remove access to shared systems;
- change shared credentials if necessary;
- update company directories;
- reassign important customer and supplier relationships.

---

18. Create Google Groups

Create communication groups such as:

- management@
- farmmanagement@
- finance@

- marketing@
- procurement@
- operations@

Use groups rather than manually adding multiple recipients repeatedly.

---

19. Build the Google Drive Architecture

Use Shared Drives where appropriate.

Create:

01 CORPORATE
02 FINANCE
03 FARM OPERATIONS
04 LIVESTOCK
05 PROCUREMENT
06 SUPPLIERS
07 HUMAN RESOURCES
08 SALES
09 MARKETING
10 PROJECTS
11 LEGAL
12 SOP
13 ASSETS
14 MEDIA
15 REPORTING
16 INVESTORS
17 TECHNOLOGY
18 PROCESSING — FUTURE
19 DISTRIBUTION — FUTURE

---

20. Drive Permission Structure

Do not give every employee access to everything.

Ownership

Executive visibility.

Business Operations & Technology Manager

Administrative and operational access required to perform the role.

Farm Manager

Relevant farm systems.

Finance

Financial records.

Marketing

Marketing and media.

Sales

Commercial information.

Farm Employees

Only the forms, documents, and systems required for their jobs.

---

21. File Naming Standard

Use:

YYYY-MM-DD_Category_Description

Example:

2026-10-05_Procurement_FeedSupplierInvoice.pdf

Avoid filenames like:

- final.pdf
- newfinal2.pdf
- document1.docx
- untitled.xlsx

---

22. Build the Evolex Hub

Use Google Sites.

Create an internal company portal called:

EVOLEX HUB

This should become the primary employee gateway into Evolex systems.

Create sections for:

- Home
- Farm Operations
- Livestock
- Employees
- Procurement
- Inventory
- Maintenance
- SOP Library
- Training
- Sales
- Marketing
- Dashboards
- Calendar
- Company Directory
- Technology Support

---

23. Create Quick Actions in Evolex Hub

Examples:

- Report Animal Birth
- Report Animal Death
- Report Sick Animal
- Record Animal Treatment

- Record Breeding
- Request Purchase
- Receive Inventory
- Issue Inventory
- Report Maintenance
- Report Incident
- View Farm Calendar
- View SOPs
- Open CEO Dashboard

Employees should click a button rather than search through folders.

---

24. Create the Employee Register

Use a controlled Google Sheet initially.

Fields:

- Employee ID
- Full name
- Position
- Supervisor
- Telephone
- Emergency contact
- Date hired
- Salary/payment arrangement
- Work location
- Responsibilities
- Training
- Attendance status
- Leave
- Employment status

---

25. Complete the Asset Audit

Physically identify major assets.

Include:

- buildings;
- pens;
- vehicles;
- generators;
- water pumps;
- solar equipment;
- computers;
- phones;
- cameras;
- farm machinery;
- tools;
- network hardware.

Photograph major assets.

---

26. Complete the Supplier Audit

Record:

- supplier name;
- contact;
- telephone;
- email;
- location;
- products/services;
- prices;
- payment terms;
- lead time;
- reliability;
- notes.

Livestock Digital System

27. Build the Evolex Livestock Master

Use Google Sheets initially.

Create one protected master register.

Fields:

- Animal ID
- Tag ID
- Species
- Breed
- Sex
- DOB
- Approximate age
- Mother ID
- Father ID
- Source
- Date acquired
- Purchase cost
- Current location
- Current weight
- Breeding status
- Pregnancy status
- Expected birth date
- Health status
- Current status
- Photo link
- Notes

---

28. Farm Workers Should Use Forms, Not the Master Sheet

Do not give unnecessary edit access to the livestock master.

Create Google Forms for field events.

---

29. Create Animal Registration Form

Fields:

- Date
- Animal ID if already assigned
- Species
- Sex
- Breed
- DOB/estimated age
- Mother
- Father if known
- Acquisition source
- Acquisition cost
- Location
- Photograph where supported
- Person entering record

---

30. Create Birth Form

Fields:

- Date/time
- Mother ID
- Father ID if known
- Number born
- Sex of each kid
- Alive/deceased
- Birth complications
- Employee reporting
- Photograph where useful

---

31. Create Death Form

Fields:

- Animal ID
- Date
- Time
- Location
- Known/suspected cause
- Symptoms

- Treatment previously provided
- Veterinary involvement
- Disposal method
- Person reporting

---

32. Create Breeding Form

Fields:

- Female ID
- Male ID
- Breeding date
- Method
- Employee responsible
- Notes
- Expected pregnancy-check date

---

33. Create Pregnancy Form

Fields:

- Female ID
- Date checked
- Pregnancy confirmed yes/no
- Method
- Estimated stage
- Expected kidding date
- Person confirming

---

34. Create Animal Health Form

Fields:

- Animal ID
- Date

- Symptoms
- Temperature where available
- Diagnosis/assessment
- Treatment
- Medication
- Dosage
- Employee/veterinary professional
- Follow-up date
- Status

---

35. Create Vaccination Form

Fields:

- Animal ID/group
- Vaccine
- Batch
- Date
- Dosage
- Administrator
- Next due date

---

36. Create Weight Form

Fields:

- Animal ID
- Date
- Weight
- Measurement method
- Employee

---

37. Create Transfer Form

Fields:

- Animal ID
- Previous location
- New location
- Date
- Reason
- Employee

---

38. Create Sale/Cull Form

Fields:

- Animal ID
- Date
- Reason
- Buyer where applicable
- Sale price
- Weight
- Payment status
- Notes

---

39. Build Breeding Management

The system must show:

- breeding females;
- breeding males;
- mating dates;
- pregnancy confirmation;
- expected births;
- actual births;
- litter size;
- weaning;
- reproductive performance.

Create expected-birth tracking for:

- next 7 days;
- next 30 days;
- next 60 days;
- next 90 days.

---

40. Build Animal Health Management

Create visibility into:

- sick animals;
- treatments;
- vaccination;
- deworming;
- quarantine;
- mortality;
- veterinary follow-up.

Create alerts for overdue health activity.

---

41. Build Feed Management

Track:

- feed type;
- supplier;
- quantity purchased;
- purchase date;
- cost;
- quantity issued;
- animal group;
- daily usage;
- current balance;
- minimum stock;
- reorder level.

Calculate:

- average daily feed consumption;

- days of inventory remaining;
- feed cost per animal.

---

42. Create Low-Feed Alert

When feed reaches the reorder threshold:

System flags shortage
→ operations receives notification
→ procurement receives notice
→ management sees alert

Month 1 Deliverables

By Day 30:

- Google Workspace configured
- Official emails operational
- Email naming standard implemented
- Google Groups created
- Drive organized
- Permissions established
- Evolex Hub operational
- Livestock physically counted
- Animal ID system established
- Livestock Master operational
- Core livestock Forms operational
- Employee register operational
- Supplier database started
- Asset audit started
- At least 5 critical SOPs completed

Month 2 — Create Operational Control

43. Install and Configure Odoo Community

Odoo Community becomes the initial structured enterprise operations platform.

Prioritize:

- Purchasing
- Inventory
- Maintenance
- Suppliers
- Projects where useful
- Employees where useful

Do not force livestock management into Odoo.

Livestock remains in the farm-data environment until the future Farm OS is justified.

---

44. Procurement System

Use this workflow:

Need identified
→ Purchase request submitted
→ Manager approval
→ Supplier selected
→ Purchase order created
→ Order placed
→ Goods received
→ Inventory updated
→ Invoice received
→ Payment processed
→ Record closed

---

45. Purchase Request Form

Create a Google Form accessible through Evolex Hub.

Fields:

- Requestor
- Department
- Date
- Item/service
- Quantity
- Reason
- Required date
- Estimated cost if known
- Preferred supplier if known
- Urgency

---

46. Approval

The purchase should not move forward until the authorized approver has approved it.

Larger purchases should require additional approval according to the future purchasing authority matrix.

---

47. Purchase Order

Approved purchases should be entered into Odoo.

The Purchase Order should identify:

- Supplier
- Item
- Quantity
- Price
- Delivery date
- Destination
- Requester
- Approval reference

---

48. Receiving

When goods arrive:

1. Confirm quantity.
2. Inspect condition.
3. Compare to purchase order.
4. Record discrepancies.
5. Record receipt in the system.
6. Place goods into inventory.

---

49. Build Inventory Management

Create categories:

- Feed
- Medicine
- Veterinary Supplies
- Tools
- PPE
- Fuel
- Spare Parts
- Cleaning
- Construction
- Electrical
- Plumbing
- Office
- Packaging — Future

---

50. Inventory Item Record

Fields:

- Item ID
- Description
- Category
- Unit
- Storage location
- Quantity
- Average cost

- Supplier
- Minimum stock
- Reorder level
- Maximum level where useful

---

51. Inventory Receiving

Every inventory receipt must identify:

- Date
- Supplier
- Purchase order
- Item
- Quantity
- Condition
- Employee receiving
- Storage location

---

52. Inventory Issuing

Every issue must identify:

- Date
- Item
- Quantity
- Employee receiving
- Purpose
- Animal group/project where applicable
- Storekeeper/issuer

---

53. Build the Asset Register

Use IDs such as:

EV-AS-000001

Fields:

- Asset ID
- Description
- Category
- Serial number
- Purchase date
- Purchase price
- Supplier
- Location
- Assigned employee
- Condition
- Warranty
- Maintenance schedule
- Photograph
- Current status

---

54. Build Maintenance Management

Track:

- vehicles;
- generators;
- water pumps;
- solar;
- farm equipment;
- buildings;
- electrical systems;
- network systems;
- future factory equipment.

Create maintenance categories:

- Preventive
- Corrective
- Emergency
- Inspection

---

55. Maintenance Request Process

Employee identifies problem
→ submits maintenance form
→ ticket created
→ priority assigned
→ responsible person assigned
→ repair completed
→ cost recorded
→ supervisor verifies
→ ticket closed

---

56. Attendance System

Initially use a simple Google Form or supervisor-controlled input.

Track:

- Employee
- Date
- Time in
- Time out
- Absence
- Leave
- Overtime
- Notes

Do not purchase expensive biometric equipment yet unless actual experience shows a need.

---

57. Create Responsibility Matrix

Every important activity must have:

- Primary owner
- Backup
- Approver
- Reporting line

Include:

- Feeding
- Water
- Breeding
- Animal health
- Animal records
- Feed management
- Inventory
- Purchasing
- Maintenance
- Security
- Attendance
- Reporting
- Marketing
- CRM
- Technology

---

58. SOP Library

By the end of Month 2, create at least 10 high-priority SOPs.

Each SOP must include:

- SOP ID
- Title
- Purpose
- Scope
- Responsibility
- Required tools
- Procedure
- Required record
- Approval
- Frequency
- Revision
- Effective date

Month 2 Deliverables

- Odoo configured
- Procurement operational
- Purchase requests operational
- Inventory functioning
- Supplier system functioning
- Asset register functioning
- Maintenance system functioning
- Attendance functioning
- Responsibility matrix completed
- At least 10 SOPs completed

Month 3 — Build the Digital Brand and Marketing Engine

59. Build the Evolex Foods Website

Use WordPress.

The website should initially prioritize:

- credibility;
- company story;
- farm development;
- education;
- future products;
- partnerships;
- recruitment;
- lead generation.

---

60. Website Structure

Create:

- Home
- About Evolex
- Our Farm

- Our Animals
- Our Products
- Sustainability
- News / Stories
- Partnerships
- Careers
- Contact

---

61. Website Account Ownership

All of the following must be company-controlled:

- Domain
- Registrar account
- Hosting
- Cloudflare
- WordPress administrator
- Google Analytics
- Search Console
- Website recovery email

Do not register company infrastructure under a developer’s personal account.

---

62. Cloudflare

Configure:

- DNS
- HTTPS/SSL
- Basic security
- Caching/performance where appropriate

Maintain documentation of DNS configuration.

---

63. WordPress

Create separate:

- Administrator account
- Editor accounts

Do not give every website user administrator access.

Use only necessary plugins.

Maintain:

- backups;
- updates;
- security;
- forms;
- SEO configuration;
- image optimization;
- analytics.

64. Google Analytics

Configure tracking for:

- Visitors
- Traffic sources
- Pages
- Geography
- Engagement
- Conversions
- Contact submissions

---

65. Google Search Console

Configure and verify the domain.

Monitor:

- Indexing
- Search queries
- Search impressions
- Clicks

- Website errors
- Sitemap

---

66. Create Social Channels

Establish and secure:

- Instagram
- Facebook
- TikTok
- LinkedIn
- YouTube

Use consistent:

- Evolex name
- Logo
- Bio
- Website
- Contact information
- Brand identity

---

67. WhatsApp Business

Create the official Evolex WhatsApp Business account.

Configure:

- Company name
- Logo
- Description
- Website
- Location
- Hours
- Greeting
- Away message
- FAQs
- Future catalog

Important commercial leads must move into HubSpot.

WhatsApp is communication.

It is not the CRM.

Evolex AI Marketing Studio

68. Your Marketing Objective

Build the capability for Evolex to produce professional marketing without requiring a large external marketing team.

Artificial intelligence should reduce the need for routine work traditionally performed by:

- copywriters;
- graphic designers;
- video editors;
- content schedulers;
- voiceover artists;
- creative agencies;
- social-media production teams.

---

69. Authentic Content Comes First

AI should amplify real Evolex activity.

Capture:

- Animals
- Births
- Feeding
- Infrastructure
- Construction
- Employees
- Veterinary activity
- Farm improvements
- Equipment

- Leadership visits
- Future product development
- Future processing
- Customers
- Community

---

70. Build the Evolex Media Library

Store original company media in:

14 MEDIA

Organize by:

- Year
- Month
- Location
- Content type
- Subject

Example:

2026
→ October
→ Farm
→ Video
→ Goat Births

Do not allow the company's historical media to live only on employee phones.

---

71. ChatGPT

Use as the primary business reasoning and marketing strategy AI.

Use for:

- campaign planning;
- content ideas;
- scripts;

- hooks;
- captions;
- social calendars;
- blog ideas;
- sales copy;
- business analysis;
- SOP development support;
- automation design;
- data interpretation;
- product concepts;
- research;
- management-report assistance.

Create reusable Evolex prompts.

Store approved prompts in the AI Prompt Library.

---

72. Claude

Claude is an approved core Evolex AI platform.

Use especially for:

- long-form documents;
- detailed SOPs;
- policies;
- large-document analysis;
- website copy;
- technical specifications;
- software architecture;
- coding;
- Farm OS design;
- complex research synthesis;
- long-form marketing material.

---

73. Gemini

Use Gemini where the work happens naturally inside Google Workspace.

Use for:

- Gmail
- Docs
- Sheets
- summaries
- email drafting
- meeting preparation
- document assistance
- spreadsheet assistance
- internal productivity

---

74. NotebookLM

Create structured company knowledge notebooks.

At minimum:

Evolex Farm Operations

SOPs, farm policies, training, operating documents.

Evolex Livestock & Veterinary

Veterinary references, breeding, health, feed, animal-management documents.

Evolex Processing

Equipment documentation, processing research, plant designs, food-safety material.

Evolex Equipment

Manuals, supplier specifications, maintenance guides.

Evolex Strategy

Business plans, growth strategy, management documents.

Evolex Marketing

Brand material, customer research, campaign strategy, approved messaging.

---

75. Qwen

Use primarily for China-facing activities:

- Chinese supplier communication
- Translation
- Equipment research
- Technical documentation
- Alibaba-related work
- Chinese business information
- Procurement support

---

76. DeepSeek

Use primarily as a secondary technical AI.

Use for:

- coding;
- technical reasoning;
- debugging;
- software support;
- alternative engineering analysis.

Do not unnecessarily upload sensitive Evolex information.

---

77. Canva

Use as the primary graphic-design production environment.

Create reusable templates for:

- Instagram
- Facebook
- LinkedIn

- YouTube thumbnails
- Educational carousels
- Farm statistics
- Recruiting
- Sales sheets
- Announcements
- Product concepts
- Presentations
- Advertisements

Do not design every post from scratch.

---

78. CapCut

Use for authentic Evolex video.

Workflow:

Import original footage
→ select best clips
→ remove poor footage
→ create opening hook
→ edit
→ add captions
→ add approved sound/music
→ add branding
→ export appropriate format

Use primarily for:

- Reels
- TikTok
- YouTube Shorts
- Facebook video
- Farm stories
- Educational video

---

79. Kling AI

Use as Evolex's primary generative-video platform.

Use for:

- advertising concepts;
- creative product scenes;
- future product campaigns;
- brand storytelling;
- visual concepts difficult to film economically.

Do not use AI visuals to falsely represent facilities, products, or farm conditions as real when they do not exist.

---

80. ElevenLabs

Use when professional AI voiceover materially improves production.

Examples:

- advertisements;
- educational content;
- explainers;
- training;
- documentary-style material.

---

81. Google Vids

Use for:

- training;
- SOP videos;
- internal communication;
- company explainers;
- educational pieces;
- management presentations.

Use internal tools before paying external video producers for routine informational content.

---

82. Buffer

Use as the centralized scheduling tool.

Create the account using Evolex company credentials.

Use Buffer to:

- plan posts;
- schedule posts;
- maintain consistency;
- reduce manual publishing time;
- review basic publishing performance.

Use native platform tools where necessary.

---

83. Weekly Content Production System

Every week:

Monday — Performance Review

Review:

- reach;
- engagement;
- views;
- followers;
- website visits;
- leads;
- best content;
- weak content.

Then:

1. Use ChatGPT, Claude, and Gemini to create the week's content plan.
2. Retrieve authentic media from Drive.
3. Use Canva for design.
4. Use CapCut for real video.
5. Use Kling for AI-generated creative scenes where appropriate.
6. Use Google Vids where useful.

7. Use ElevenLabs where voiceover is required.
8. Human-review all public content.
9. Schedule through Buffer.
10. Publish.
11. Respond to relevant comments/messages.
12. Record performance.
13. Use AI to analyze results and improve the next cycle.

---

84. Weekly Content Capability Target

Build the capacity to produce approximately:

- 3–5 short videos per week;
- 3–5 graphics/carousels per week;
- 1 substantial educational/company piece per week;
- stories and updates where useful.

Do not publish weak content simply to meet a quota.

---

85. Repurpose Content

One real farm event should create multiple assets.

Example:

A goat gives birth to twins.

That event can become:

- Instagram Reel
- TikTok
- Facebook Reel
- YouTube Short
- Photo post
- Educational carousel
- LinkedIn post
- Website story
- WhatsApp Status

- Educational caption

Use AI to generate derivative content rather than recreating each asset manually.

Month 3 Deliverables

- Website live
- Cloudflare configured
- Analytics configured
- Search Console configured
- Social accounts operational
- WhatsApp Business operational
- Media library operational
- Canva templates operational
- AI content-production workflow operational
- Buffer configured
- Content calendar operational
- At least 15 SOPs completed

Month 4 — Build the Commercial Engine

86. Implement HubSpot

HubSpot becomes Evolex's commercial system of record.

Do not use random spreadsheets as the primary customer database.

---

87. HubSpot Company Record

Capture:

- Business name
- Location
- Website

- Industry/category
- Estimated opportunity
- Products potentially required
- Notes

---

88. Contact Record

Capture:

- Name
- Position
- Telephone
- Email
- Company
- Decision-making role
- Last communication
- Next action

---

89. Customer Categories

Create categories:

- Restaurants
- Hotels
- Supermarkets
- Butchers
- Wholesalers
- Distributors
- Food processors
- Caterers
- Schools
- Institutions
- Exporters
- Retail chains

---

90. Sales Pipeline

Configure:

Prospect Identified
→ Contacted
→ Qualified
→ Meeting
→ Sample
→ Quote
→ Negotiation
→ Won
→ Repeat Customer

Every active opportunity must have a next action.

---

91. Build the Buyer Database

Document:

- Company
- Location
- Contact
- Phone
- Email
- Category
- Product interest
- Estimated volume
- Current supplier where known
- Quality requirements
- Delivery requirement
- Payment terms where known
- Evolex opportunity
- Last discussion
- Next action

---

92. Market Intelligence

Use buyer conversations to understand:

- products that are hard to source;
- quality problems;
- required volumes;
- prices buyers pay;
- packaging preferences;
- delivery frequency;
- certifications;
- payment terms.

This information should influence future production and product development.

---

93. Gmail and CRM

Connect Evolex sales communication with HubSpot where appropriate.

Commercial communication should become part of the customer history.

Do not allow important relationships to exist only inside personal WhatsApp accounts.

Month 4 Deliverables

- HubSpot operational
- Customer categories configured
- Sales pipeline configured
- Buyer database established
- Commercial research underway
- Sales reporting included in management dashboard
- At least 20 SOPs completed

Month 5 — Automate Repetitive Work

94. Review Workflows

Identify repetitive tasks involving:

- copying;
- calculating;
- checking;
- reminding;
- sending;
- moving information;
- creating recurring reports;
- duplicate data entry.

These are automation candidates.

---

95. Google Apps Script

Use Apps Script for appropriate automation.

Examples:

- animal ID creation;
- birth notifications;
- expected-birth reminders;
- feed reorder alerts;
- medicine expiration alerts;
- purchase approval notifications;
- overdue maintenance alerts;
- missing daily report alerts;
- weekly report preparation;
- data validation.

---

96. Example — Birth Automation

Employee submits Birth Form
→ system validates Mother ID
→ new Animal ID generated
→ animal record created
→ mother’s reproductive history updated
→ birth register updated

→ herd count updated
→ dashboard updated
→ supervisor notified

---

97. Example — Feed Automation

Feed balance updated
→ inventory reaches threshold
→ system flags LOW FEED
→ operations receives alert
→ procurement receives notice
→ management dashboard changes status

---

98. AppSheet

Use AppSheet only when Forms becomes too limited.

Potential apps:

- Evolex Livestock App
- Inventory App
- Maintenance App
- Farm Inspection App
- Animal Health App
- Asset Inspection App

Build an app only when it improves:

- speed;
- data quality;
- mobile usability;
- employee adoption.

---

99. Looker Studio Dashboards

Create:

- Livestock Dashboard
- Feed Dashboard
- Operations Dashboard
- Commercial Dashboard
- Marketing Dashboard
- Financial Operations Dashboard
- CEO Command Center

---

100. CEO Command Center

The executive dashboard should display:

Livestock

- Total herd
- Females
- Males
- Kids
- Pregnancies
- Births
- Deaths
- Mortality
- Herd growth

Health

- Animals under treatment
- Health alerts
- Vaccinations due
- Mortality concerns

Feed

- Current inventory
- Days remaining
- Feed cost
- Reorder alerts

People

- Employees present
- Attendance
- Major performance issues

Operations

- Open tasks
- Maintenance issues
- Incidents

Inventory

- Critical inventory
- Outstanding purchase requests

Financial Operations

- Week-to-date spending
- Month-to-date spending
- Major cost categories
- Upcoming cash requirements

Sales

- Prospects
- Qualified leads
- Meetings
- Quotes
- Customers

Marketing

- Followers
- Reach
- Views
- Content produced
- Website traffic
- Leads

Projects

- Current initiatives
- Status
- Major delays

Risks

- Critical issues

Management Decisions Required

Short, actionable list.

Month 5 Deliverables

- Priority workflows automated
- Management dashboards operating
- CEO Command Center operating
- AppSheet deployed only where justified
- Reporting increasingly automated
- Data-quality checks operating

Month 6 — Stabilize and Prepare for Scale

101. Month 6 Objective

Make the system independent of you.

A successful system is not one only you know how to use.

A successful system survives your absence.

---

102. Audit Every System

Review:

- Email
- Drive
- Permissions

- Livestock
- Breeding
- Animal health
- Feed
- Employees
- Attendance
- Suppliers
- Procurement
- Inventory
- Assets
- Maintenance
- Website
- Analytics
- CRM
- Marketing
- AI
- Dashboards
- Automations
- SOPs

---

103. Data Quality Audit

Identify and fix:

- missing animals;
- duplicate animals;
- invalid IDs;
- missing supplier records;
- incorrect inventory;
- unclosed purchase orders;
- missing maintenance records;
- inactive accounts;
- incorrect permissions;
- missing CRM follow-ups;
- broken automations;
- outdated website information.

---

104. Employee Adoption Audit

Determine:

- who uses systems correctly;
- who avoids them;
- which forms are too complicated;
- where internet access creates problems;
- which processes are duplicated;
- where employees require training.

Simplify where necessary.

---

105. Complete the SOP Library

Every major recurring operation should have an SOP.

Store all SOPs centrally and link them through Evolex Hub.

---

106. Create Training Videos

Create short videos explaining:

- how to report a birth;
- how to report a death;
- how to report a sick animal;
- how to request a purchase;
- how to receive inventory;
- how to report maintenance;
- how to find an SOP;
- how to find company files;
- how to enter a CRM prospect;
- how to schedule a marketing post.

---

107. System Administration Manual

Create a restricted administration record containing:

- system name;
- business purpose;
- account owner;
- administrator;
- users;
- permissions;
- billing owner;
- renewal period;
- recovery process;
- integration;
- data owner;
- backup process;
- important configuration information.

Do not store passwords directly inside the document.

---

108. Create the Next 12-Month Technology Roadmap

At Month 6, present recommendations for the following 12 months.

Base recommendations on actual operating needs, not on what technology happens to be popular.

---

109. Farm OS Requirements Document

By Month 6, document requirements for the future proprietary Evolex Farm OS.

Potential modules:

- Livestock
- Breeding
- Genealogy
- Health
- Vaccination
- Feed
- Weight

- Farm tasks
- Alerts
- Offline mobile
- RFID
- Multi-farm
- Analytics
- Management dashboard

---

110. When Farm OS Development Should Begin

Recommend active development when one or more of the following occurs:

- herd approaches approximately 750–1,000 animals;
- a second livestock location becomes operational;
- Google Sheets begins creating material data-quality problems;
- RFID becomes operationally justified;
- multiple employees need more complex livestock workflows;
- offline farm operation becomes important;
- existing systems materially slow operations.

---

111. Farm OS Responsibility

The Farm OS should manage:

- animals;
- breeding;
- animal health;
- farm production;
- feed relationships;
- field data;
- farm alerts;
- animal analytics.

It should not unnecessarily recreate accounting, warehousing, CRM, or manufacturing.

---

112. Future Architecture

Eventually:

Evolex Farm OS
Animals and farm production

↓

Odoo
Procurement, inventory, processing, manufacturing, warehouse, distribution

↓

CRM
Customers and commercial relationships

↓

Data Platform
Consolidated information

↓

Business Intelligence
Management dashboards

↓

AI
Prediction, analysis, productivity

Management Reporting

113. Weekly Owner Report

Submit one standardized report every week.

Do not substitute dozens of disconnected WhatsApp messages for formal reporting.

Include:

Executive Summary

Major developments.

Livestock

- Opening herd
- Births
- Purchases
- Deaths
- Sales
- Closing herd
- Pregnancies
- Health issues

Operations

- Completed work
- Outstanding work
- Problems

People

- Attendance
- Staffing
- Performance concerns

Inventory

- Feed
- Medicine
- Critical stock

Procurement

- Requests
- Purchases
- Open orders
- Supplier problems

Financial Operations

- Weekly spend
- Month-to-date spend

- Upcoming cash needs

Sales

- Prospects
- Meetings
- Quotes
- Opportunities

Marketing

- Content produced
- Reach
- Views
- Audience growth
- Website traffic
- Leads

Projects

Current status.

Risks

Top operational risks.

Owner Decisions Required

Keep this concise and actionable.

---

114. Monthly Management Review

At the end of every month present:

- systems completed;
- systems delayed;
- KPI performance;
- herd performance;
- data quality;
- operational issues;
- technology usage;

- software cost;
- AI cost;
- marketing output;
- marketing results;
- commercial pipeline;
- automation completed;
- labor savings;
- next-month priorities;
- management decisions required.

AI Economics

115. AI Is a Labor-Leverage Strategy

Do not judge AI only by subscription cost.

Measure:

- AI/software cost;
- hours saved;
- content created;
- external production avoided;
- turnaround time;
- sales material produced;
- marketing output;
- automation savings.

---

116. Marketing Cost Reduction

The long-term objective is to avoid unnecessarily building a traditional marketing cost structure with numerous separate roles.

AI should allow a smaller internal team to perform significant portions of:

- copywriting;
- graphic production;
- video editing;

- voiceover;
- content scheduling;
- content repurposing;
- campaign ideation;
- performance analysis.

Human judgment and quality control remain necessary.

---

117. Do Not Give Every Employee Every AI Tool

Assign paid AI and creative licenses according to job requirements.

Farm workers generally do not need paid access to:

- ChatGPT
- Claude
- Kling
- ElevenLabs
- Canva premium

Advanced tool access should initially be concentrated with the Business Operations & Technology Manager and relevant marketing or management personnel.

Software Upgrade Triggers

118. Google Workspace

Use Business Standard for the core management and administrative team.

Review when:

- security requirements increase materially;
- administrative headcount expands;
- storage needs grow significantly;
- enterprise governance becomes more complex.

---

119. Google Sheets

Use initially for livestock data.

Begin migration toward Farm OS when:

- herd reaches approximately 750–1,000 animals;
- multiple farms exist;
- RFID is required;
- data errors become material;
- workflow complexity exceeds spreadsheet practicality.

---

120. Odoo Community

Use for current back-office operations.

Review professional hosting or a more advanced implementation when:

- processing begins;
- manufacturing begins;
- multiple warehouses exist;
- inventory becomes financially significant;
- traceability becomes critical;
- system downtime becomes costly;
- distribution becomes complex.

---

121. HubSpot

Use the free or low-cost CRM stage while the commercial team is small.

Review when:

- dedicated sales staff expands;
- CRM user requirements increase;
- automation becomes important;

- customer database grows materially;
- marketing automation becomes important.

Before committing to large recurring CRM costs, compare upgrading HubSpot against consolidating more CRM functionality into the broader enterprise architecture.

---

122. Buffer

Use the lowest-cost plan that handles current publishing needs.

Upgrade when:

- manual scheduling consumes meaningful employee time;
- more channels require centralized scheduling;
- approval workflows become necessary;
- posting volume exceeds capacity;
- the subscription costs less than the labor it replaces.

---

123. Canva

Start at the lowest level that meets requirements.

Upgrade when:

- brand controls become necessary;
- multiple employees create content;
- premium assets materially improve productivity;
- AI/design production increases;
- the subscription produces measurable labor savings.

---

124. Runway

Do not make Runway part of the initial recurring stack.

Add it later when Evolex begins producing more sophisticated campaigns that justify advanced generative-video production.

---

125. AI Stack Review

Review every six months:

- ChatGPT
- Claude
- Gemini
- NotebookLM
- Qwen
- DeepSeek
- Kling
- ElevenLabs

Do not change tools simply because another product becomes popular.

Consider changes when:

- quality materially improves;
- cost materially decreases;
- integration improves;
- security improves;
- a new business requirement emerges;
- a tool materially reduces labor.

Six-Month Scorecard

126. Farm

By Day 180:

- 100% of livestock registered
- Births digitally recorded
- Deaths digitally recorded
- Breeding digitally tracked

- Pregnancies tracked
- Animal health tracked
- Treatments tracked
- Feed tracked
- Herd reconciliation performed regularly

---

127. People

- Employee register complete
- Attendance operational
- Responsibilities documented
- Training conducted

---

128. Operations

- Procurement functioning
- Inventory functioning
- Supplier management functioning
- Asset register functioning
- Maintenance functioning
- Purchase approvals functioning

---

129. Digital Infrastructure

- Google Workspace configured
- Email naming standard implemented
- Evolex Hub functioning
- Drive properly organized
- Permissions implemented
- MFA/security implemented
- System administration documented

---

130. Website

- Website live
- Company controls domain
- Cloudflare configured
- Analytics operating
- Search Console operating
- Contact forms working

---

131. Marketing

- Social accounts operational
- Media library operational
- Canva templates operational
- Video-production workflow operational
- AI workflow operational
- Buffer operational
- Content schedule operating
- Performance reporting established

---

132. Commercial

- HubSpot operational
- Buyer database established
- Sales pipeline operating
- Commercial opportunities tracked
- WhatsApp Business operational

---

133. Management

- Weekly owner report consistently produced
- Monthly management review operating
- CEO Command Center functioning

- Major risks visible
- Management decisions clearly identified

---

134. Documentation

- Major SOPs completed
- Training videos created
- System administration manual complete
- Employee training completed

---

135. Future Readiness

- 12-month technology roadmap completed
- Farm OS requirements documented
- Upgrade triggers reviewed

Final Six-Month Presentation

136. Demonstrate the Systems Live

At the end of Month 6, present the systems to ownership.

Do not simply present slides saying the systems exist.

Demonstrate:

- creating a new employee email;
- opening Evolex Hub;
- finding an SOP;
- registering an animal;
- recording a birth;
- recording a sick animal;
- recording treatment;
- viewing expected births;

- checking feed inventory;
- submitting a purchase request;
- approving a purchase;
- creating a purchase order;
- receiving inventory;
- finding an asset;
- submitting maintenance;
- opening HubSpot;
- creating a new commercial prospect;
- moving a sales opportunity;
- opening the media library;
- creating a marketing piece using AI;
- editing video;
- scheduling a post;
- reviewing website analytics;
- opening the CEO Command Center;
- identifying a real management problem from the data.

---

137. Definition of Success

The first six months are successful when Evolex no longer depends primarily on:

- verbal reporting;
- individual memory;
- random notebooks;
- personal email;
- personal phones;
- uncontrolled WhatsApp communication;
- disconnected files;
- unstructured spreadsheets.

Information should increasingly flow like this:

Physical Business Activity
↓
Structured Digital Record
↓
Company System
↓
Management Information
↓

Decision
↓
Action
↓
Performance Measurement

---

138. Your Long-Term Responsibility

You are helping build the digital nervous system of Evolex.

Your objective is to help create an organization that can eventually operate thousands of animals, multiple farms, processing plants, warehouses, products, and customers without losing management control.

Technology should allow Evolex to remain lean.

AI should multiply employee productivity.

Automation should eliminate repetitive administrative work.

Data should improve decision-making.

Systems should survive individual employees.

Ownership should have remote visibility.

The company should invest its capital primarily into productive assets and growth rather than unnecessary administrative overhead.

Your mandate is:

Make Evolex measurable.

Make Evolex organized.

Make Evolex digital.

Make Evolex visible.

Automate what should be automated.

Use AI to reduce operating and marketing cost.

Build systems that can scale.

Build today for the company Evolex intends to become.
